
Neutronics Solutions to Represent Global Antenna Designer and Manufacturer SkyCross

OTTAWA, Ontario – March 9, 2010 – Neutronics Solutions, a Canadian representative of semiconductor components, embedded systems, solid-state lighting solutions, and digital prototyping CAD and electronic design software, has added SkyCross to the elite group of companies that it represents. SkyCross is an award-winning antenna designer and manufacturer providing solutions for the mobile phone, home entertainment, and computing industries. The vendor co-agreement indicates that Neutronics Solutions will represent SkyCross products and services within Canada.

SkyCross offers an unparalleled combination of antenna technology, quality-certified high volume manufacturing, and local customer support. SkyCross engineers work closely with customers to develop a custom solution that meets their specific needs. The company reduces time to market through full-service regional centers in North America and Asia. These facilities are certified for high quality and environmental standards including ISO9001:2000, ISO14001:2004, RoHS, and WEEE Green.

Whether developing an embedded or external antenna solution, SkyCross optimizes performance, size, power consumption, and cost while supporting a multitude of frequencies and protocols. In addition, exclusive iMAT® technology from SkyCross replaces multiple antennas and eliminates other RF components to save space, integration time, and money while maximizing network throughput – a solution that is critical for 4G systems. Just last month, iMAT won “Best Network Technology Advance” at the Global Mobile Awards in Barcelona.

“SkyCross is a wonderful addition to our product offering,” said David Stubbs, President of Neutronics Solutions. “SkyCross is widely recognized in the industry, and we’re proud to be offering our customers access to such a flexible, and cutting-edge mobile technology which empowers device designers to create next-generation consumer electronics.”

“SkyCross is excited to be working with Neutronics to expand its footprint,” said Frank Migliarese, Vice President of Global Sales at SkyCross. “Neutronics Solutions has a strong local reputation, and we are pleased to have them lead our continued growth in Canada.”

About Neutronics Solutions

Neutronics Solutions represents an elite group of international companies, offering antenna solutions, semiconductor components, embedded systems, solid-state lighting solutions, electronics design and digital prototyping CAD software as well as design services. Neutronics is an Ottawa-based company with sales offices in Toronto, Montreal and Vancouver. www.neutronics.ca

About SkyCross

SkyCross (www.skycross.com) is a global designer and manufacturer of antenna solutions for the mobile phone, home entertainment, and computing industries. SkyCross provides high-performance antenna technology bundled with RF system-level expertise and responsive regional support from its full-service facilities in the USA, South Korea, China, Taiwan, and Japan. This convenient approach empowers device manufacturers to develop winning consumer electronics products and deliver them to market faster and easier. The industry has recognized SkyCross as a key enabler of 4G technologies, and patented iMAT MIMO antenna technology from SkyCross was named the “Best Network Technology Advance” at the Global Mobile Awards 2010.
